Data Analyst

Operations and analytics professional with 8+ years of experience supporting data-informed decisions, identifying operational trends, and improving performance across CPG and healthcare environments. Combines hands-on experience analyzing operational data and financial variance with formal data analytics training. Experienced in translating complex information into actionable insights, evaluating information quality, and communicating findings to cross-functional stakeholders.

WORK EXPERIENCE

Ascension St Thomas West • **Nashville, TN** **06/2025 - Present**

Operations Coordinator

- Identified and implemented over $80,000 of cost-savings initiatives through product and financial analysis while maintaining inventory availability for a storeroom housing around 1,500 products.
- Forecast product usage against vendor lead times to initiate, verify, and track purchase orders through internal systems for more than 200 regularly managed products, supporting accurate replenishment and continuity of supply.
- Maintained item-level tracking and monitored contract compliance for high-value products, coordinating with 30+ vendor representatives to support accurate records and operational consistency.
- Collaborated with clinical, supply chain, and integration departments to communicate changing requirements, evaluate product changes, and support operational decisions.

General Assembly • **Nashville, TN** **08/2024 - 11/2024**

Fellow

- Analyzed complex datasets, identifying trends, evaluating data quality, and investigating discrepancies to inform actionable strategies for alignment with business objectives.
- Synthesized analytical findings into concise reports and detailed presentations, making key trends and insights accessible to stakeholders.

PepsiCo • **Nashville, TN** **01/2018 - 08/2024**

Sales Merchandiser • **Full-time**

- Reduced stock discrepancies by 20% through root cause analysis and implementing corrective actions to ensure accurate transactions and prevent overstock or shortages while reducing damages.
- Improved replenishment efficiency by 30% through analysis of inventory needs and coordinating cross-functionally with store management, supply chain personnel, and warehouse teams.
